

Helping Manage AI and Data Security Risk in Higher Education

Colleges, universities, research centers, and other higher education institutions face significant challenges when it comes to managing and securing sensitive data. Concentric AI's leading AI and data security governance solutions help address these challenges.

Data spread across many siloed systems—student databases, research repositories, email servers, online learning platforms, and more.

Cloud and on-prem data repositories scanned at speed and at scale; context-driven data discovery, categorization, and classification.

Faculty, students, researchers, administrative staff, and third-party vendors with varying access requirements, working from different devices and locations.

Continuous monitoring to flag classification errors, excessive permissions, risky sharing, and more, with autonomous remediation and ability to detect abnormal user activity in relation to data.

No visibility into or control over how students, faculty, and staff are interacting with AI, which creates compliance, privacy, and IP risks.

Sensitive data dynamically monitored and protected across multiple AI use cases including AI assistants such as Microsoft Copilot, public AI such as ChatGPT, and proprietary AI workloads.

Student records, financial, health, alumni, and research data are shared across multiple departments and seldom reconciled or deleted.

Contextual understanding of data enables discovery of duplicate and near-duplicate records; automated data retention policies managed in the platform.

Lack clarity about compliance status for multiple legal, regulatory, and research-driven requirements, e.g., FERPA, GLBA, HIPAA, NIST CSF.

Clear insights into compliance with various frameworks through Compliance Dashboard, simplified reporting, and a full audit trail of data access and usage.

Small teams managing multiple tools with significant time and budget constraints.

Lightning-fast deployment with no agents or complex rules; multiple tiers of advisory and managed services.

Concentric AI is intelligent data security made easy, delivering AI-powered governance that helps businesses protect sensitive data, reduce risk, strengthen compliance, and enable safe AI adoption.
