

Future-Focused Protection for High-Tech Data

High-tech organizations prioritize rapid growth and continuous innovation, adapting quickly to build and deliver products, ship new features, and forge partnerships to drive adoption.

But this “move fast” mindset also makes it difficult to protect sensitive data from exposure. Data is copied and shared across diverse, complex environments faster than it can be tracked. Security teams quickly lose visibility into data that resides on-prem and in the cloud—in data lakes, developer environments, SaaS applications, and more.

The data is accessed by employees, contractors, partners, and suppliers from multiple devices and locations, and extensive integration ecosystems introduce new avenues for exposure.

Misconfigurations, over-permissioned accounts, forgotten data stores, inconsistent retention policies, or “shadow data” that’s created and stored on unsanctioned devices make it difficult to determine where sensitive data resides, which users and tools have access, and what they’re doing with it.

The lack of insight means organizations also can’t tell when employees are sharing trade secrets with AI assistants such as Microsoft Copilot or pasting product roadmaps into public tools such as ChatGPT. Nor can they tell whether in-house models are training on sensitive content.

Key Benefits

Contextual visibility into PII, PHI, behavioral and usage data, IP, source code, and more

Guardrails to prevent data leakage through AI tools

Continuous monitoring to discover data risks

Automated data retention policies

Protection against accidental or intentional data exposure

Clear insights into compliance gaps

Sprints, Roadmaps, and Data Security Gaps

The product and engineering teams are prioritizing aggressive roadmaps and rapid deployment, but your security tools can’t keep up, and your data risk is growing.

Intellectual property (IP) and user data are being exposed due to overly broad permissions, misconfigurations, the use of AI without guardrails, and more.

You need solutions that can scale with you.

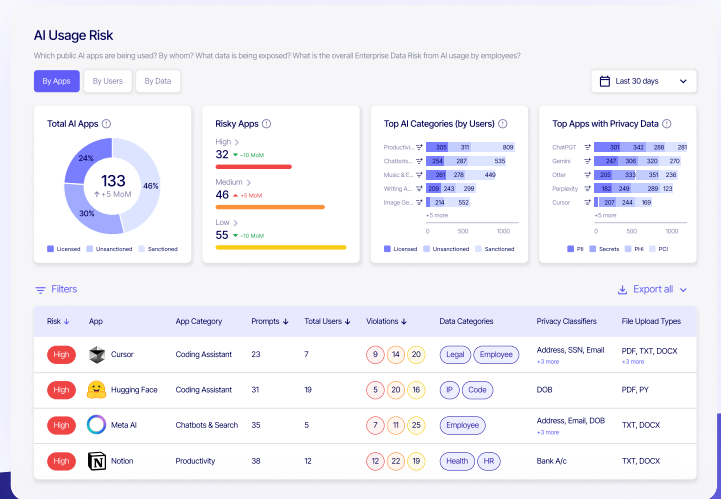

Innovate Without Compromising Your Data

From PII and PHI to patents, AI/ML models, and user telemetry, high-tech organizations must secure sensitive data across their products, users, operations, and infrastructure.

Concentric AI's AI and data security governance platform protects your data at rest, in motion, and across all the GenAI applications your users interact with.

The platform deploys without agents or complex rules, scanning cloud and on-prem repositories at speed and at scale to immediately deliver actionable, AI-driven insights. It contextually discovers and categorizes data, and performs ongoing risk monitoring to uncover excessive permissions, unauthorized access, classification issues, duplicate and stale data records, and more. The data lineage feature shows how data moves across your organization while the user behavior data analytics feature identifies abnormal user activity in relation to data. Once risks are identified, remediation actions can be configured and autonomously enforced directly in the platform.

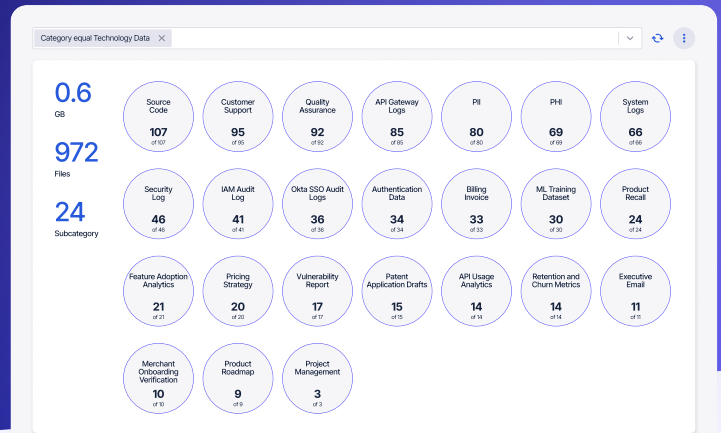

And if you're using AI tools to automate workflows, improve productivity, and enhance your customer experience, we give you the guardrails to prevent your sensitive data from being exposed. Our solutions dynamically monitor to protect sensitive data from being leaked via AI assistants such as Microsoft Copilot, shared with public AI like ChatGPT and Claude, or exposed to proprietary AI workloads. We'll show you all the tools being used in your organization as well as which applications pose the highest risk—and then we'll help you block or mask sensitive data before it's used in prompts.

Risk Managed, Revenue Unlocked

It's time to stop worrying about the risk of data exposure across your complex and constantly changing environment and focus on accelerating time-to-market.

With Concentric AI, you get AI and data security governance solutions that protect your sensitive data at scale, so you can preserve your competitive advantage.

About Concentric AI

Concentric AI is intelligent data security made easy, delivering AI-powered governance that helps businesses protect sensitive data, reduce risk, strengthen compliance, and enable safe AI adoption.
